Statit™ Software's Performance Improvement Software Solutions Added to GSA Contract *Statit targets the federal government market for healthcare quality improvement*

WASHINGTON, D.C. – July 9, 2007 — Statit Software, Inc., the premier provider of statistical process control (SPC) technology for quality improvement, today announced the addition of their performance improvement software products to the GSA Contract via their government reseller, Symmetry Services Group, a woman-owned small business in Vienna, Virginia.

Peter J. O'Neal from the Clinical Information Technology Program Office (CITPO) said: "As the Quality Manager for the DoD's Electronic Healthcare Record system (AHLTA), I rely on metrics everyday to identify process shortfalls and other issues. The Statit tool provides me (and leadership) with this insight in a quick, accurate manner. There are no proprietary business rules to change or unique databases to deal with -- it's just the data presented in standard, statistical, easy to read formats."

The CEO of Statit Software, Thomas J. Simas, said, "Our government clients are a growing part of our business. Not being on the GSA contract has put an additional burden on them which is in direct opposition to how our solutions help them improve performance. In the future, those who qualify for GSA pricing can buy without having to go through a laborious procurement process. Streamlining this administrative task will help save our government money by improving their productivity."

Bill Fowkes, the President of Symmetry Services Group said, "The addition of Statit's continuous quality improvement (CQI) products to our existing GSA contract was a logical step in better supporting our government customers. Symmetry is dedicated to supporting our federal government customers, contractors who supply critical needs to our government, as well as others who qualify for the reduced GSA pricing. The most productive part of buying off the GSA contract is the fact that our qualified customers know they are getting the best price without having to go out on a request for proposal or negotiate individual terms and conditions. We are excited about being able to offer our customers this convenience."

About Statit Software, Inc. — Statit Software, Inc. is based in Corvallis, Ore. Statit is a leading developer of process optimization software technologies. Statit provides tools that assist users in understanding and managing processes and their outcomes for optimal quality, consumer satisfaction, and cost containment. Users can access, track, analyze, compare and contrast clinical, operational, financial, and quality key performance indicators—for a single facility or a multi-facility enterprise—all at the desktop and all instantaneous at the click of a button. Statit Software provides enterprise solutions through its web-based applications for total and continuous quality improvement. For more information, contact Ormond T. (Norm) Galvin, (541) 752-1687, or visit www.statit.com.
