FOR IMMEDIATE RELEASE**Statit™ Software, Inc. and Symmetry Services Group sign Federal Government Agreement**

Statit targets the federal government market for healthcare quality improvement

WASHINGTON, D.C. – April 16, 2007 — Statit Software, Inc., the premier provider of statistical process control (SPC) technology for quality improvement, today announced the strategic alliance with Symmetry Services Group, a woman-owned small business in Vienna, Virginia.

The CEO of Statit Software, Thomas J. Simas, said, “At a time when the federal government is demanding cost reductions, while needing to improve healthcare quality, all of us at Statit Software are excited about having a qualified government reseller in the Washington, D.C. area. By teaming with Symmetry, Statit will be able to deliver valuable performance improvement products while knowing our federal government customers will receive outstanding local support when needed. The entire healthcare industry, both government and industry, is under siege from internal and external forces. The days of manual work, business charts, suspect and vague interpretation will be a thing of the past which is why we are focused on continuous quality improvement (CQI) solutions and excited about working with Symmetry.”

Bill Fowkes, the President of Symmetry Services Group said, “Statit Software truly adds value to the missions of both Federal end users and prime contractors. We are looking forward to helping our clients by offering Statit’s quality products for statistical process control. You can’t pick up a paper today without reading about the need for continuous quality improvement (CQI) in our government’s healthcare system for our military. However, the challenges go well beyond our military. By teaming with Statit, Symmetry will be able to provide additional value for our clients by offering them the Statit piMD software solution. Statit’s piMD product will help our clients access and display real-time information from their database, spreadsheets, and ancillary information systems. Our government clients need to be certain that their information is kept confidential. We like the fact that Statit’s piMD solution runs behind our client’s firewall, uses their data regardless as to where it resides, and yet is accessible to anyone in the organization who is authorized to use it.”

About Statit Software, Inc. — Statit Software, Inc. is based in Corvallis, Ore. Statit is a leading developer of process optimization software technologies. Statit provides tools that assist users in understanding and managing processes and their outcomes for optimal quality, consumer satisfaction, and cost containment. Users can access, track, analyze, compare and contrast clinical, operational, financial, and quality key performance indicators—for a single facility or a multi-facility enterprise—all at the desktop and all instantaneous at the click of a button. Statit Software provides enterprise solutions through its web-based applications for total and continuous quality improvement. For more information, contact Ormond T. (Norm) Galvin, (541) 752-1687, or visit www.statit.com.
