Web-based Analysis and Reporting
for Quality Improvement

Statit e-QC

Web Portal

Create a quality portal to simplify your data analysis and reporting processes.

While most companies have enormous amounts of data, it is not typically available to users in a way that allows them to quickly and easily spot trends, anticipate problems, and identify underlying causes.

Statit Software has the solution with Statit e-QC, a dynamic Web-based application that serves as a quality portal, allowing you to easily and cost-effectively integrate a wide array of information, while providing a centralized system for quality improvement analysis and reporting.

Use the immediate, interactive and powerful capabilities of the Web to distribute quality improvement analysis across your enterprise.

Statit e-QC accesses information from a wide array of heterogeneous corporate databases and data file types. From within a web browser, authorized internal or external users view and analyze their operations in real-time, or scan automated reports.

Statit e-QC is configurable to meet a wide range of information needs and skill levels; easy to use, support, and access; and still powerful enough to provide in-depth quality analysis and reporting.

Build a quality-focused enterprise.

As a result of using Statit e-QC, anyone in your enterprise can contribute to quality improvement efforts. As a result of being able to pinpoint and correct problems in their area, they can have a positive effect on overall costs, consumer satisfaction, and product quality for your company.

Depend upon the enterprise quality improvement software experts at Statit Software.

Join other manufacturing leaders like IBM, Nokia, Emerson Process and Precision Castparts Corp., who have looked to Statit Software for software, training, education, and support to bring quality programs on-line.

Statit e-QC and Enterprise-wide Quality Improvement

Q: What is Statit e-QC?

A: Statit e-QC is a continuous quality improvement strategy based on Internet technology that fundamentally changes the way a manufacturer approaches the issue of insuring quality products and services. By empowering individuals across the system with access to quality analysis and reporting capabilities through common Web browsers, it expands the responsibility for quality from the hands of a few individuals or specific divisions to include the whole organization. With Statit e-QC, everyone in the organization takes on the responsibility to continually assess, improve, and monitor quality. The results are more satisfied customers, more efficient processes, improved productivity, and ultimately, increased profitability.

Q: How does Statit e-QC work with our data?

A: Rather than dictate a specific data source or format, or implement a proprietary data storage mechanism, Statit e-QC takes an open approach to accessing data. Statit e-QC can access data from any popular database, as well as data files. The software can provide reporting for the users by accessing data from multiple disparate data sources. Statit can also write back to your data sources, so as to include comments, corrective actions, and assignable causes.

Q: Can Statit e-QC notify users of alerts or out-of-control conditions?

A: Statit e-QC can automatically send email notifications to users based on any SPC or business rule violations. Depending on the severity of such violations, different emails can be sent to different users or groups. Statit e-QC can also automatically update the built-in report dashboard so users can address those areas most in need of attention.

Q: What type of drill-down capability is available in Statit e-QC?

A: Because of the interactive nature of the web-based Statit e-QC application, various actions can take place when a user clicks on reports. They can drill down multiple levels through their data; operators can be asked to enter comments or data. In addition, web sites, documents or other applications can be launched.

Q: What system requirements are needed to run Statit e-QC?

A: Statit e-QC requires a Microsoft web server to run the application. Users need nothing more than a common web browser to access and analyze the quality data.

More Quality Improvement Products and Services from Statit Software

Statit e-Server. Construct quality systems built on Statit's powerful statistics and graphics engine.

Statit Custom QC. A completely customizable quality control solution that enables you to create unique procedures, menus, and dialogs to match your needs precisely. Includes the capability for publishing Statit reports and graphs to an intranet, extranet, or public website.
