

Statit Physician Profile & Review

Chief Medical Officers can review physician performance and schedule reviews with the click of their mouse

Drill down to patient encounter level data

Physicians can review their own performance and reviews and see how they compare with their peers

The screenshot displays a 'Profile for Carson, Debra ED North Q2 08' with various performance indicators like 'HF - All or None Bundle' and 'HF LOS'. It also shows a 'HF LOS by Physician Q2 08' table and a 'Profile for Landrum, James ED North Q2 08'. A 'Reviews' section shows a trend line for 'Average LOS' and a table of review dates and comments.

The success of your performance improvement initiatives relies on actionable, automated reporting of key indicators and profiles. Replace your manual, printed output with Statit's automated physician profiles. Organize and report on every physician within your delivery system, tying strategic objectives to the performance of patient care, medical/clinical knowledge, practice-based learning & improvement, interpersonal & communication skills, professionalism and systems-based practice. Now more than ever, you can manage physician performance through quantifiable analytics designed to be visually appealing and intuitive.

- Statit Physician Profile & Review's automated reporting helps you alleviate the challenges inherent in manual reporting including:
- Allowing profile indicators to come directly from numerous and varied data sources. This greatly improves the quality of the information by eliminating the numerous copies of data that are typically used with manual reporting efforts.
 - Managing the peer group for comparisons
 - Providing secure, data access to each physician's performance
 - Easily drill down to patient encounters
 - Date, electronic signature and comments and action plans by reviewer
 - Meet The Joint Commission's OPPE initiative

Chief Medical Officers and hospital leaders are challenged with identifying improvement opportunities throughout the delivery system. Statit Physician Profile & Review provides an automated, measurement and monitoring system which accesses data directly from MIDAS+, Excel, Access, databases and other sources to align strategic hospital objectives with physician performance and practice patterns against targets and alarms.

Statit Physician Profile & Review allows each physician to compare their performance with their peer group. In addition to providing a profile with information pertaining to performance and quality metrics, Statit provides aggregated trend information for each indicator in the profile with The Joint Commission rule set identifying outliers. From the trend output, the physician can "click" to drill down to summarized patient records that comprise the data point and ultimately, to the individual patient record. In this way, the physician can be confident that the data analyzing their performance is valid. Additionally, the encounter level data provides a backdrop to the physician and medical officer with root cause detail, culminating in corrective action plans.

Statit Physician Profile & Review allows your organization to meet The Joint Commission's standards for credentialing, privileging and ongoing professional practice evaluation. More importantly, Statit Physician Profile & Review gives your chiefs tools to understand and manage the performance of their physician teams. These tools help chiefs understand not only how their team is performing, but who is performing differently within their teams. Data can be easily sliced and diced to drill through and find answers to underlying performance questions.

Statit Physician Profile & Review is deployed at your site, on your intranet for your internal customers. Within our two day deployment, you will have a number of profiles created and ready for electronic or printed distribution to your medical staff and administrators.

Statit™ Solutions Group

435 NW 5th Street, Ste B
Corvallis, Oregon 97330

Statit Physician Profile & Review: Q & A

For the Provider...

Q: Can I drill down through to patient encounter level data?
 A: Sure, as long as your data source supports this level of detail. Clicking on the period of interest from the trend output will provide summary and detail records, configurable within Statit.

Q: How often does my performance profile get updated?
 A: Your profile is updated each time the data source used by the indicators is updated. When you view your profile, your information is as timely as the most current data source update.

Q: How do I select the peer group for comparison purposes?
 A: Through the use of a "physician look-up table", you can identify specialties and/or regions by doctor (for example, ED North). When a specific physician profile is displayed, the peer group used for comparison purposes will automatically be established based on the look-up table specialty identifier.
