

Simplifying Provider Performance Review

Experience the Synergy of MIDAS+ Solutions

Together, the **MIDAS+ Statit Physician Profile & Review (PPR)** and **MIDAS+ DataVision** applications create the most robust, user-friendly, and cost-effective software solution for all your Ongoing Provider Performance Evaluation (OPPE) and Quality Improvement Initiatives.

Streamline the provider review process while meeting and exceeding The Joint Commission (TJC) OPPE Standards for monitoring medical practice and patient safety across your entire healthcare organization.

Identify performance trends in real time and provide unprecedented visibility to more effectively communicate to medical staff and involve them in your quality improvement process.

Integrate data from nearly any source, which allows you to display and manage a wide variety of performance data, including processes of care, clinical outcome measures, financial performance, case reviews, surveys, event reports, personal evaluations and patient satisfaction data.

Compare physician performance and overall hospital performance to one of the nation's largest comparative databases for benchmarking clinical outcomes, patient safety, and national quality measures.

Review key features and benefits on the next page.

Key Features and Benefits of MIDAS+ Statit PPR and DataVision

An IT Solution that Works for Your Business

The MIDAS+ system is installed in over 1,000 hospitals nationwide and has over 20 years of experience in software solutions supporting case, quality, and risk management, provider credentialing, reappointment, and regulatory reporting.

Web-based Access

The Statit PPR solution provides Web-based tools to complete online provider reviews and display real time performance data. Security limits access to individual providers, departments, divisions, or groups. With worklists and reminder tools, reviewers and providers can drill down to patient-level detail. They can also evaluate performance trends using statistical process control charts that set the standard for SPC charting in healthcare.

National Comparison Data

The system supports over 3,000 metrics, including AHRQ Patient Safety and Inpatient Quality Indicators, National Hospital Quality Improvement Measures, and CMS Hospital Acquired Complications. LOS and Mortality data is severity-adjusted using 3M APR DRG methodology and includes national comparison data by provider specialty. Updated monthly, your benchmarks will be current with national trends and best practices.

Intuitive Reporting

Clinical end users can select a measure and export reports with a click of a mouse. Ad hoc reporting is supported with an ODBC-compliant report writer for export to multiple file types.

Provider Networking

Join our physician network and participate on monthly Webinars to explore practice trends and strategies for meeting TJC standards.

Ease of Implementation

The MIDAS+ Statit PPR and DataVision solution leverages existing interface data for the MIDAS+ Care Management application. Interfacing additional source data is rapid and user friendly. And our competitive pricing schedule will make implementation easy on your budget!

We've partnered with hospitals all over the country. How can we help you?
